

OV PNM: Sweep Analytics Tool (SAT)

Eliminate Unnecessary Sweeps on Good Nodes and Focus Your Resources Where They're Needed Most

OpenVault's SAT can help save time and money on maintenance costs by proactively identifying nodes that need sweep and re-balancing. Sweeps are required to check the integrity and performance of the cables and connectors in the plant, and to identify potential issues before problems arise.

OV PNM: Sweep Analytics Tool Allows You To

- Perform maintenance when and where it is needed. Reduce costs and free up resources.
- Identify downstream Rx changes and upstream Tx changes
- Baseline nodes and monitor for deviations to identify changes that may be impacting network performance
- Reduce downtime and improve overall network reliability

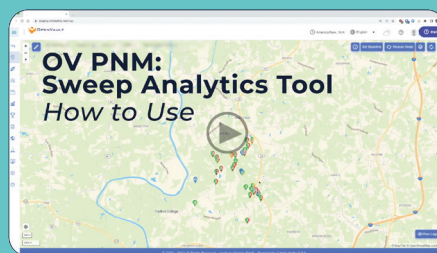

Now You Can

- **Increase signal quality and reduce signal degradation:** from cable and connector issues, minimizing dropped connections, increasing voice quality and reduce data transfer rates
- **Decrease Downtime** identify potential failure points before they cause downtime and outages
- **Reduce repair costs:** identify issues in a timely manner before they become more severe and require extensive repair and or replacement
- **Protect network capacity:** cable and connector issues can lead to reduced network capacity
- **Identify potential safety hazards:** prevent accidents from faulty cables and connectors.

OPTIMIZE NETWORK PERFORMANCE AND REDUCE MAINTENANCE COSTS BY TAKING A PROACTIVE APPROACH TO NETWORK MAINTENANCE
